ELE-OFLY

Features you need, Prices you want.

Functional

Fully adjustable to your shooting needs, the offset element piece can be put in few different variations. It can be set to where the camera is perfectly eye level or below eye level. With the offset piece, you can also offset your camera to where the camera is right in front of you or in the complete opposite direction.

Adjustable & Adaptable

The base plate height can be adjusted to be higher or lower, giving you more latitude for shooting. The grip handles can easily move more closer in or further away from the crossblocks, with a quick twist of the thumb screws and re-tighten, you can position the grip handles anyway you see fit.

Accessorize

Pro battery power solutions that are available can be accessorized with your rig by mounting it in to the back of the shoulder pad, also giving you some good counter weight to work with.
